CONTENTS

What is ProjectFNF? ProjectFNF is a small lightweight engine for Friday Night Funkin' built by Aflacc. This engine is easy to add features and configure already existing ones. It is easy to pick up and understand how to use. To get started with using the engine, see [this](<https://github.com/aflacc/ProjectFNF/wiki/Setup-Workspace>) wiki page.

What will this Wiki teach you?

This wiki will help you compile mods. There will be a message at the top of the Wiki page if the page can be used for other engines.
